

ABSTRACT OF THE DISCLOSURE

A mobile phone transmits an e-mail with attaching captured image data thereto, to a data center. In response to arrival of the e-mail from the mobile phone, the data center transfers the image data attached to the e-mail to a database for storing while associating
5 the image data with user ID information for identifying a user who sent the e-mail concerned. Responding to access with ID notification, the data center retrieves designated image data from the database, and transmits the retrieved image data to a photo vending machine. The photo vending machine transmits request information including the user ID information to said data center, and receives the image data which
10 are transmitted by the data center in response to the request information. The photo vending machine prints the arrived image data in accordance with the user's instruction.
